

Cleanness Education: Teachers are the Protagonist or vice-versa

Dr. Tapas Pal

Assistant Professor, Dept. of Geography, Raiganj University (India)

Cleanness is the basic criterion to develop everything. In recent, the term '*Cleanness*' is an important political as well as social and cultural hotcake for Indian history and geography. But being a teacher I wish to give a name before the title like *Siksha* or Education. Discrepancies and anomalies may present in different sectors of education. But to touch the ever success we need some measures. Policies and Equities are not only the way to fresh the whole education system of everywhere rather importance should be given on the thinking, philosophy perception, motivation, ethic and value.

So you may ask me who will be the changer or key developer of the education system properly and how could we curtail the lags in education system. The answer is very easy. Teacher is the key factor to make the revolutionary changes in whole education system and to reduce the pollutions in education atmosphere.

Teachers' role should be like to improve and manage the quality parallel with the quantitative education. We are facing three problems in India like: health, economy and education. If we have to abolish these three then must have to strong the development of the nation continuously. The recent problem in education sector is we have enough quantitative development but we are poor in qualitative improvement. So how would we come out?

The teachers' role is more significant for qualitative development. Without the greater contribution of teachers *Cleanness Education* is not possible. Lots of students have enjoyed the many degrees but it has been observed in most cases students are completely or partially unable to fill up their admission form in higher education. In most of the cases modern students are the follower of SET-SIDE LEADERS i.e. 'my friend is doing this , so I am doing this' or 'Degree carried helpless' i.e. 'I don't know what will I do after getting this degree'. Even they are unable to write the application to get the school leaving certificate. Quality of Education is related with

the *Cleanness Education* and when the INPUT (infrastructure, curriculum, policy, teaching-learning material etc.), PUT OR PROCESS (teaching) AND OUTPUT (human resource) shall be attached with the quality of the teachers then the pollutions of education system must be eradicated. The usefulness of the teachers will be highlighted when his/her knowledge, skill and understanding must be linked with the application on the student's thinking, value, knowledge, ethic etc.

For teachers three things are very much relevant for *Cleanness Education* i.e. qualification, aptitude and skill for best teaching. Teachers' are the engine or heart to make the *NirmalSikshagoal*. Some people say that infrastructure is important to give the proper education. But my question is which types of modern internet or ICT lab was used in *Gurukul* education, *Pathshala* or in *Moqtab*. We are in web world but why the second is not born like Rabindranath Tagore, Swami Vivekananda, Rishi Arabinda, Iswar Chandra Vidyasagar in our ICT labs. So the matter is not related with the technology, rather is related with the proper educated teachers. We don't need the plagiarism software during the *Gurukul* education. But now it is mandatory i.e. somewhere the concept of *Cleanness* has become the question in world education system.

Teacher's role is vital because they are making the life of students. If they failed to do it then the society and simultaneously the nation can't be *Nirmal*. Because when a student is getting the *Cleanness Education* from his teacher then he can transfer to his students. Now we need to redefine the role of teachers. Role of teachers are more than the parents because parents have little time in modern clock but teachers have at least 8 hours' time as a job for students. *Hazarath Muhammad* was defined the line "donate the knowledge and education rather wealth". So preaching is important parallel with teaching and a teacher does it. We have also to keep the line of *Srimaghbhat Gita* like "work is the religion" so teacher's main duty is to work for his students rather for the religion.

Plate : In Munna Bhai MBBS Cinema Actor Sanjay Datta represents a cheating formula during the Exam.¹

To make the more *Cleanness Education* we need more discussion. A teacher becomes as a teacher when he/she shares the knowledge related with the curriculum and donates the education. Teacher can't be the property-dealers. But to increase the API (Academic Performance Indicators) of their carrier, there are some teachers polluting the *Nirmal* approach of education. Some teachers are getting only certificates of paper presenting in seminar /conferences without attending that seminar /conference physically even; or publishing their research in respect of money; coping the materials from others documents without proper citing the references. Thus, the academic culture is being polluted. Not only that, in higher education there are some teachers may earning illegal money to give the chance in the courses like M.A. /M.Phil. / Ph.D. after taking huge money or abusing the CL/DL /EL without using these leaves in proper purpose. All these are observing like a 'Big Boss' by the students or learners. The pollution has entered within the learners through the nature of illegal works of their teachers. So, when the student may became the teacher the short-cut-education system may apply for his students.

Actually the total transfer of 100% education has been reducing in the education chain (like a food chain). For example, students are approximately getting 100 % education because 20% (approx.) syllabus is not finished by the teachers in most of the cases; 10% knowledge is moved to back stage because teachers may provide the suggestions or leaked the questions to his/her favorite students, learners avoid 10% syllabus to make the short & suggestive questions and 10% time is being curtailed naturally from the scheduled of 1 (one) hour class because teacher may come 10 minutes late or leave the class room 10 minutes before the schedule. So, Guru's 100% knowledge is not absorbing by the *Sishya*/pupils.

Again the demand of Biometric has risen in educational arena, for example, teachers' attendance has become questionable. Teachers may maintain their attendance register book properly but actually not following the everyday classes excepting the Sunday or holyday. Thus, students are observing these Back-doors from their teachers and the total education system is being polluted.

We need the proper coordination between secondary school teachers with colleges and college teachers' with university teachers.

In the recent times, teachers are using the Cell phone during their classes and simultaneously in some cases students are also following the same. But it's actually not relevant during their class time as because fixed scheduled time is allotted for teaching not to attend the outer works except class works. In some cases teachers would not updated with the present syllabus, modern classroom technology, academic demand of the students and even when he comes to class, ask the student 'what is the topic of today's?' The question is: you are the teacher and you have not selected what will you have to teach today, i.e. you are not prepared for the class. So, how your students will get the Maximum and Completer Education?

Thus, the *Cleanness Education* will be materialized when the teachers will be *Nirmal* as per their duties in academic field. Sometime teacher gradually says this to his student that 'your capacity is very low to achieve it; so, you're not able to do it.' But the perception should be like that 'it's my duty to create the environment like that way to improve his ability or to provide that stage which is suitable for flourishing the carrier of the student. The concept of ignorance should be totally abolished from the thinking of the teacher. And so forth, the *Cleanness* must be present in the mind of the teachers firstly, then it have to apply, only by then, a *Cleanness Education* will finally come across and from there the *Nirmalmentally* students will be born for the society and Nation at large. We can only progress when our teachers will forward themselves one step for their students.

Not only to discuss on the teacher's performance to students, rather are the approaching to his /her colleagues also important to make the *Cleanness Education*. The behavioral presentation with female colleagues is important and vice-versa. Sometime teachers earn illegal money in respect of the sign for practical sheets; which is called the 'professional shark'. We have also to stop this type of educational business and have to keep in mind about the professional ethics.

Unless the good human-being, proper dress and health sense nobody can't make *Cleanness Education*. *Cleanness* is very important both from inner and outer side of the teachers.

Suppose you are continuing teaching for 20 years continuing and you are not updating yourselves academically then the ultimate cleanness can't be opened. In recent, moreover, the interdisciplinary and multidisciplinary approaches have come in education which is relevant with the continuous upgradation of the teachers. Sometime teacher teaches with the help of fixed old notes which have studied by him in his own student life. And if somehow the notes are not present in hand then you just imagine what will be the situation? So, notes based education has to curtail. Many teachers using the Wikipedia's information to give the data to the students. But he/she can't know that it is not the proper authentication of the sources of data. To kick the *Cleanness Education* another thing has to follow us i.e. teacher is not only for class teacher, rather teacher is Tagorian teacher even out of the class. Sometime there are some teachers think that the relation and duty of the teacher only up to the class or scheduled classes. It's completely has to reduce. We are teacher for 24 x 7 for the pupils. In ancient time, students absorbed the guru's knowledge with the staying at the courtier of guru for long time. That means teachers were mainly associated with their beloved students in the Ashrama.

In this era of digital education, there are some teachers think that we will not teach in class and will supply the notes to the student's email. Please remember those teachers' web/internet/ computer can give the information, not knowledge, that teacher can do only.

To glorify the *Cleanness Education*, the behavior to the subordinate staff is also important. You are teacher/ Professor etc. only, but not the rulers for your office staffs. So to make the

clean of the official environment, teachers have to give the prestige to the official staffs also.

In modern education teachers enjoy some internal assessment (around 20%) and may think that he has enough controlling power to make slave like students. It's completely wrong thinking and have to evaporate this for complete *Cleanness Education*. Again those students are less intelligent teachers have to give more importance on them. But in reality it has observed that there are some self-claimed intellectual teacher over-looked this issue. Right now we are in the equity of inclusive education so all types of students have equally right to enjoy the equal teaching.

It has been observed in some places that lady teachers are abusing their rights due to some personal jealous, she arises the sexual allegations. It's should not be used in the educational environment. Of course, raise your sound against the real cases not for the false. Students are our light and we are the lamp. If lamp is polluted then the light will be the same. Our duty is to rail the life of the students on appropriate track. Some teachers say to the authority or the students that 'I have completed my allotted syllabuses. Now a question can be asked to that finished-man 'a syllabus can be bounded in some words and sentences but not in the boundary of knowledge'. Moreover, just think that if you are not serving to your students, same case may be continuing in case of your son in another college or universities. Then what will you think?

Sometime teacher provides the examples from his/her own religion and tries to establish the hypothesis that 'my religion is superior to other'. Leave the thing and think that teachers have no religion, caste, race, gender and sex. Students are like the plants, teachers are the gardener and his knowledge is the water. Commitment should be planted in the mind of every teacher. There are some teachers always say that 'students are very facility-finder, so, don't believe on them'. My question is if as a teacher you do not believe on the students then how a student will trust on his students, society, and nation even on family after becoming the teacher in future. Teacher will be the focused-teacher for his/her ability, capacity, value, morality and dignity, not by name or title.

A teacher will be a focused teacher when he has some feelings like job satisfaction, self-confidence, communication skill, involvement, interest, subject mastery, communication skill. The input (study, knowledge, experience) within the teacher must be continuous either no output (good teaching)

will come out. So, to make the *Nirmal updated siksha* is important.

A teaching is started with/from the questions and finished with the same. Thus at the initial stage, the question must be relevant for the students to make their concentration, another thing at the end, the question must be relevant for evaluation. The actual question is here to make the *Cleanness Education*, we need very confidential (secret) procedures during preparing the questions. Sometime teacher leaks the question to earn the money, to make the group (politics) or making setting with the local private tuition teachers and supply him or her for more tuitions and teacher collect half of the total tuition fees from that private tuition organizers. It is being held very secretly. We have to concern about this for cleanness education. Again there are some teachers are earning money from their students in respect of giving high marks in an interview or to give the job. To do it teachers are leaking the questions or collecting all the questions of different teachers per day. Unfortunately if the interview process is continuing for 30 days then the questions may be repeated and the applicant can get the questions very easily. In some cases the teacher (as a member of the selection board) decided the topic of demonstration for the applicant (student) and told him / her before the date of interview for the money.

Ragging should be totally banned from education system. A teacher can motivate the students for this. But sometime teacher is very much interested on the biological demands from their research scholars or students. If the scholar denies then the teacher follow the intellectual politics. Teacher expresses his negligence to finish the scholar's Ph.D. or do late to sign the papers. Such type of pollution has to totally ban from education system.

In this globalization arena pollution is everywhere. Our education system is not free from this. But we have to remind that we are the causes of pollution and it's our responsibility to clean it. Most of the teachers are going towards the Chair. The actual truth is the Chair will go to you when you will become a *Clean teacher*
