ABSTRACT

This theme of continuous improvement of tourism has progressed toward becoming amazingly up - to - date in the present state this situation, the ecological or on the other hand ecotourism has made contemporary as a key part of current sightseeing, and its continuous improvement. Accomplishing objectives derive from the idea of the supportable improvement of sightseeing, as one of the most essential types of sightseeing, is seeming, an urgent prerequisite, & liability of all the general public & nations. Such a pattern of sightseeing enhancement, & specifically of the eco-tourism, it is difficult to keep up & enhance without elevated attribute eco-animation which adds to basic perceptible by sightseers & all tourism partners of the significance of ecology on an expedition, particularly since nowadays it isn't simply nature which is presented to the danger of contamination, yet additionally human society and their way of living.

This paper especially manages with different variety and form of eco-animations and their incorporation (indispensable replica of eco- animation), intensification of ecological awareness & feasible sightseeing advancement.

1. Introduction

Future in the eco-tourism advancement, sustainable development depends on the idea of tourism as a monetary division that allows redemption of profits and producing circumstances for work. Its effect on the earth, the eco-tourism helps in enhancing, safeguarding & security of the domestic flora and fauna by implementing the idea of eco friendly-tourism which adds in the feasible improvement of tourism since it depends on an ecological ideology which incorporates the defense of the environment from all potential types of contamination. In this frame of reference, the function of eco-animation concentrated on the supportable improvement of sightseeing. Back in the last century form, the period of the 1970's the possibility of "feasible improvement" or "points of confinement to development" was encouraged. It introduced "the idea of eco-efficiency" & "the idea of ecological modernization". In regards, eco-effectiveness specifies the innovations which give financial advancement, yet with negligible ecological corruption. The idea of ecological modernization is reflected. Eco-efficiency indicates to advancements that give monetary improvement, yet with negligible ecological degradation. (Đorđević & Tomka ,2011)

The plan of ecological modernization is replicated for the purpose of present-day innovation that should be advanced, particularly by the developed countries, since there are minimal chances for underprivileged nations to forfeit their monetary advancement for taking care of the tremendous ecological issues, as urbanized countries are mostly responsible for it. Likewise, agreeing for the "green creators", rich nations ought to respond not in favor of "consumerism", i.e. the customer attitude that calls for the confinement of improvement & arrival to easier living things. (Hadžić, 2005).

Eco-Animation, as the principal theme of this study, alludes in which cooperates with the animated movies created for the communities (i.e. hard eco-tourists), where intentions are firmly moral based & inspire by means of an aspiration to enhance the reality in which we subsist, & animation of society (soft ecotourists), whose contents & actions are acknowledged with eco-tourism, as an exceptionally significant type of present-day sightseeing.

This paper states that eco-animation is about and is based on a comprehensive model of eco-tourism, by utilizing an all-encompassing methodology which incorporates: thoughtful understanding, the constructive alteration of outcomes, ecological and socio-cultural, financial sustainability, tourist's approval, and the advertising sustainability, both at national & worldwide levels. These specific situations, eco friendly-animation happens to be a collection of shapes & sorts. (Glinia, Costa & Antoniou, 2001).

2. Eco-tourism–conscience of the sustainable improvement of sightseeing

The idea of reasonable sightseeing alludes to all types of tourism that are in a lengthy haul blended with the regular, social and social condition. (Weaver, 2006).

As indicated by Moscardo (2003), the supportability of tourism depends on 3 key standards:

- **Quality** implies the understanding of sightseer adds to the improvement of eco-friendly tourism enhancing the quality of living in the local small group & furthermore quality of protection & enhancing the cultural & natural environment.

- **Balance**, which implies that the eco-friendly sightseeing strikes the balance among the necessities of the host & sightseers on one side, & the favorable conditions on the other.
- **Continuity** implies that eco-friendly tourism guarantees the progression of all the natural assets on which it is established, & furthermore it indicates the progression of the regional population, and in addition the coherence of the enthusiasm of vacationers & seekers for a specific tourist destination.

Eco-tourism as a standout is among the most vital types of sustainable tourism development, & as its advertiser, it helps in the advancement of healthy atmosphere & cultural variety.

The result shows the relevance of eco-tourism, which shows the ethics of eco-friendly tourism improvement.

As indicated in previous researches, the eco-tourism revolves around 3 segments and these are:

- **Natural environment**, or its particular components, for example, certain types of fauna and greenery;
- **Education**, as an outcome of the connection between sightseers and the common habitat; and
- **The requirement of maintainable improvement** of eco-tourism to the point that it is logically achievable.

The need for the reasonable sightseeing advancement solitary out the eco-tourism as the main segment, considered as the still, conscience of ecotourism improvement. Although, this is the after effects of the overall introduction of eco friendly-tourism for accomplishing the idea of economical friendly tourism improvement, as well as objectives which are essential for it (Muller, 2004). These segments (regular habitat, training, need for maintainable development), calls attention which is generally fused into various meanings of eco friendly-tourism. (Đorđević,(2002)

One of these is as per the following: the eco-tourism is a "trip into the domain of the natural world went for comprehension (seeing) the civilized & natural history of the ecological improvement, with regular watch over conserving the uprightness of eco-frameworks,delivers cost-effective returns that provide the inhabitants with the means to safe and sound their survival & are used for financial support of the activities interconnected to shielding & preserving the natural ecological system

3. Eco-animation intended at initial & reviving environmental-friendly activities by tourist

Each visitor expedition, regardless of whether it alludes to an individual visitor vacationer gatherings, incorporates an assortment of exercises sorted out for voyagers including those environmental, associated with the systematization & safety of the individual surroundings. With the existence of ecological exercises for a visitor journey, & particularly during their stay for a specific tourist destination which relies totally on the point of ecological awareness & considering the

significance of eco friendly-tourism & its part in the growth of eco-friendly tourism, & this can not only be achieved with the help of tourists but also requires all the components engaged with the provision of the services that address the issues & wants of visitors.

However, it is impossible to envision at all the visitor activity related to ecology(environmental) without the help animated movies/videos for the sightseers, basically known as eco-animation/ environmental-animation. This term eco-animation is referred to the method involving the procedure where tourism-related illustrators & activity which helps to motivate tourists & demonstrates a noteworthy interest in the execution of different environment friendly-animated programs. Projects like these ought to be found for giving out a superior level of information in relation to environmental-tourism, and additionally, in regards to the particular activities that are ought to be sorted out in the perspective of meeting out all the ecological requirements, with regards to alteration in the socio-cultural & natural surroundings of the specified vacationer destination and its surroundings. These activities associated with environmental animation, in addition, to other animated activities, therefore leads to an increase in the liking of visitors if in case, these visits are efficiently planned and implemented. The outcome of these types of activities could be the conclusion of the animation in the framework of environmental changes, which are likewise to be an influential motivator for all those visitors which, prior to starting off their trip, have no earlier eco-tourist understanding & ecological activities were never the main topic of their concern. (Wood & House, 1991).

In the perspective of a booming animation, the environmental changes not only actively involves the visitors but also encourage curiosity regarding eco friendly tourism, which is a inspirational travel experience that not only increases their wish for the grasp of a exclusive experience at ecotourism destination, on the other hand it decreases the intensity of uneasiness that tourists are more or less likely to be familiar with. Sources which incorporate an entire range of activities related to environmental animation are associated with the well-off and distinguish offers on the various range, particularly on ecological activities. The aspect of environmental animation is not only to accomplish immediate revenue at any cost but for the long-term accomplishment of high gains but for the fulfillment of visitors requirements & wishes, in addition, making their experiences and time unforgettable. (Weiermair & Fuchs, 1999).

New types of ecological offers, which contains the high-value of environment-related animation, strongly attract prospective visitors, mostly because of their interest & commitment towards traveling & selection of vacation destinations. As per the duration of environment-related activities & in regards to his/her capabilities, wants, and beliefs, each visitor can be defined & acknowledged as a valuable group member. The more extensive environmental animation allows visitors to understand the nature and human relationships. In addition, gives another perspective of the mother earth and the human race, they live with.

Nothing like the narrow environment animation, broader environmental animation is applied to the visitors who are mainly motivated by the eco-tourism, & the wide-ranging animation which is complex in nature. It aspires, through the execution of environment-friendly animated programs, to build a strong motivation in terms of creating the right atmosphere & ambiance, so a genuine illustrator is more than required, unlike the smaller eco-animation where specialized tourist guides, with suitable proficiency on expected areas and eco-friendly systems, would be quite adequate.

4. Eco-animation aims for a better perceptible of eco-tourism and its sustainable development.

The limited eco-animation alludes to the limited scope of animation activities and adds to a more profound understanding of eco-tourism and its part in the supportable tourism. From the practical and sociological perspective of eco-tourism which is generally applied to individuals, regardless whether have some prior travel experience or are budding tourists without any prior experience of this kind.

Those associated with eco-tourism, whether small-scale or medium enterprises or agencies operating in gorgeous and well-preserved natural reserves (e.g. national parks). Tourist services and activities planned for small groups have emphasized on educational and interpretative character, which implies distributing various materials and publications, organizing various educational information centers, as well with the involvement of dedicated sightseer guides.

Such sightseers are determinedly orientated on gaining personal experiences and awareness of the environment, in addition to addressing needs identified with the level of information. In this uniqueness, the element of present-day visitor offers, animation or eco-animation, plays a vital part in denoting the quality of tourism as a whole.

Eco-animation mainly focuses on education and the current market trends i.e. exclusive experiences of visitors who represent prime customers during their stay and getting to enjoy the nature. What's more, a few vacationers require higher subjective and experiential segment during their time spent on eco animation in an eco-friendly resort, yet regardless of the psychological and experiential parts of sustainable eco-tourism development, particularly the advancement from the economical point of view of eco-tourism. All this depends on the environmental information and eco-tourism experience and, considering all the things it results in a positive change regarding further improvement of sustainable tourism and eco-tourism. The constricted eco-animation includes elements of rural and cultural tourism. It adds to the growth of enthusiasm for eco-tourism, especially among the young generation, who require a higher level of education in eco-tourism.

Currently, present-day sightseers are essentially keen on cultural tourism. They are interested to find out about plant and creature species living in clean surroundings. In the meantime, they get involved in the life of local societies that dwell in ecological and vacationer areas. Such interests can be met by coordinating the activities of eco-tourism elements and social legacy tourism, by framing such items that enable vacationer to

get involved with local traditions and customs, cultural and historical landmarks & art, with regard to the natural environment.

5. An Integral replica of eco-animation in eco-tourism

In the same way, the basic representation of eco-tourism, an essential replica of eco-animation can be connected including unique gatherings of visitors. The basic eco-animation model demonstrates animate vacationer groups with regards to their more broader differentiation, beyond all separating them into smaller & bigger groups, where the initial group, which includes a smaller section, & is better educated & more intrigued, & the other one is diversified & includes a broader variety of visitors in the context of their requirements.

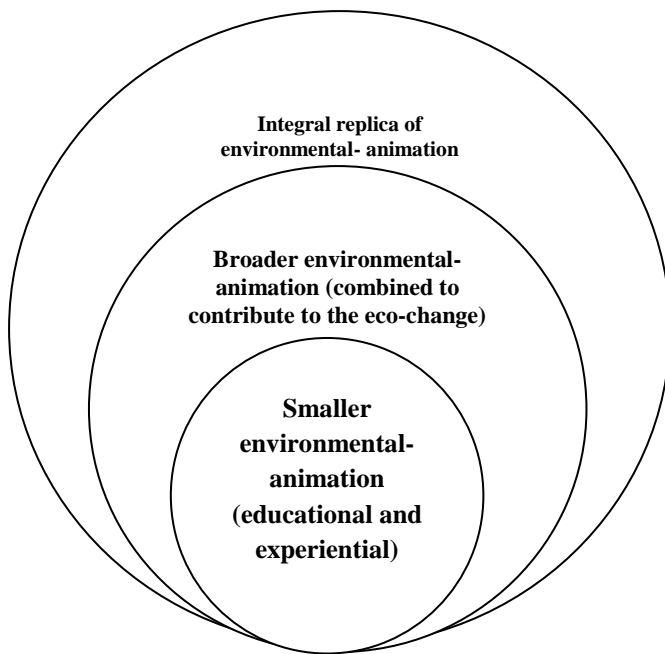

Also, eco-animation can be divided into two parts: the educational and the experiential, Educational eco-animation; combines ability, capability, information of environmental animation & eco-friendly tourism, with the motive of changing in accordance with the request, in circumstances where the choice of eco-travelers groups extends to the highest limit adapted according to the demand of tourists through in-depth research & division of the tourism market. The collective eco-animation considers precisely the involvement of animating eco-friendly tourism with a motive to make a decent outlook towards nature and culture.

Such a kind of animation must merge various requirements & wants of vacationer in favor of the eco-friendly environment, which puts the ecosystem in the center of attention. In this sense, the general climate & environment must be paying attention to the enthusiasm of the vacationers in natural & local traditions. Now, lift up the interests & the quality of the experience of visitors with meaningful animation, on the significance of the natural environment & local traditions.

In this way, vacationers in a combined gathering, hypothetically, can gain new abilities and in the long run turn into a smaller gathering of true eco-tourists.

The integral replica of eco-animation in sightseeing involves an integrated move which is not a part, but an arrangement, as complete with creativity as a vital part. It is imitated in rural and cultural tourism, which, is a careful form of tourism, that is directly linked with eco-tourism. The structure of the ecological tourism emerges as tourism in the light of nature and natural beauty, and eco-animation emerges as a channel for prominent abilities & a deeper understanding in the field of educational and experiential eco-animation which encourages the curiosity in a variety of environmental activities. In the primary case, the educational significance of eco-animation has a cultural impact, which incorporates various sub-pointers: the value of creative, socio-historical and scientific research with the addition to the significance of a rare natural-cultural inheritance. In the subsequent case, the eco-animation is viewed as an essential feature in approaching these ethics.

The explanation of eco-animation is revealed in the figure below, which signifies an integral replica of eco-animation:

The figure above signifies the integration of large and small eco animations into the integral replica.

The role of an animator in creating animation for ecotourism is not just to focus on more extensive eco-animation using large groups of a sightseer, but also by focusing on small eco-animation by integrating various activities related to the small and big animations, and to find out the best achievable options in the eco-tourism & sustainable development of sightseeing in one piece.

6. Conclusion

The eco-animation is a precise animation which is carefully analyzed in this research keeping in mind the

perspective of eco-tourism as one variety of tourism aiming for sustainable development. The result of eco-animation is divided into smaller and broader symbols which are parts of the integral replica of eco-animation, comparable to the previously specified integral replica of eco-tourism. Furthermore, the smaller eco-animation groups focus on educating & providing a distinctive experience to sightseer by using the current inclination towards "the market of experience", by hiring specialized tour guides.

On the other hand, the more extensive eco-animation, the more intricate it's nature as it aims at the intensification of the ecological awareness by conditioning for a strong motivation to provide adequate environment and atmosphere for various ecological activities, significant to the protection & enhancement of the environment. Thus, specialized animators with skills & capabilities related to tourist animation, & therefore for the immense eco-animation ought to be employed.

Numerous result of eco-animation can be accomplished by effective usage of an incorporated replica of an integrated representation of eco-animations, & on top of all, for the assertion of an intense consideration of eco-tourism, whose uniqueness is a straight outcome of a multifaceted & broad knowledge of the idea of sustainable tourism development.

eco-tourism of this kind, includes an extensive eco-animation & accomplishment of a holistic advancement to nature & sightseer appeal, is associated with eco-tourism and animation, aiming at sustainable development. Likewise, eco-animation if successfully executed, creates an environment for an increase in income for the future, & consequently, the conditions for an outlay of all the events associated with the assurance & advancement of eco-tourism locations should be kept n mind.
