## ABSTRACT

The culturally diverse Indian society has undergone far-reaching changes in its social fabric, altering gender role linked beliefs and attitudes regarding family. In this light, the paper seeks to examine the inevitable disagreements among urban married couples while shouldering the duties of marriage/home and ambitious careers, leading to highly stressful lives. Specifically, the present paper explores the propensity among dual career couples to express their disagreements openly to each other, and the issues that trigger such arguments. A structured questionnaire was used to collect data regarding the frequency of arguments on specified areas affecting marriage. The analysis of 238 marriages in Bangalore city reveals that financial concerns, sharing household responsibilities, management of time, parenting, relationship with in-laws, and habits and addictions turned out to be common triggers of marital arguments among dual career couples. We also note that both duration and quality of marriage were inversely related to frequency of arguments.

## 1. Introduction

Relocation is authentically not a progressing wonder. India has since a long time prior seen movement of different structures and in different positions and classes yet with the developing social, social and monetary circumstance the quantum and example of relocation exhibit a fluctuating example. The persuading factors for relocation have been varied. For some movement is an elective technique to guarantee survival while for other individuals, it suggests better development openings, improved financial standard and a superior personal satisfaction. Late examinations reveal that inexorably more relocation is happening looking for jobs and such movement is for moderately longer periods than beforehand.

The examples of relocation to the extent the association of vagrant masses inside family incorporate

- Migration of complete nuclear families,
- Migration of couple of people from each family,
- Migration of a couple
- Single male or Single female relocation.

In light of the spot of birthplace and goal the present examples of movement incorporate rustic provincial relocation, country - urban relocation and further movement from provincial districts and minimal urban networks to metropolitan regions. The National Sample Survey data demonstrates a creating design towards rustic – urban movement.

In the Indian setting, considers on provincial urban relocation are, all things considered, amassed at the motivation behind goal, that is, in the urban district, and composing on the effect of male out movement on ladies is moderately pitiful.

In present period there are a broad number of couples who are isolated and maintaining a strategic distance from home for a business, for long time. Since the openings for work in both open and private fragment are very restricted every year the amount of taught jobless addition at a disturbing rate. These jobless people migrated from towns and town to urban communities and to various states. Some of them furthermore

moved to outside countries, particularly to focus east, searching for business and thriving for the duration of regular daily existence.

Laborers heading out to another nation are mostly men. Openings for ladies have all the earmarks of being few and far beneath contrasting with men. A couple of classes of specialists with compensations over a supported least are qualified for take their families. Regardless, every single one of the people who are qualified for take their families with them don't do thusly. This is commonly an immediate consequence of the nonattendance of instructive workplaces or high regular expense. They wish to spare a great deal of money since the occupations there are viewed as basically temporary.

The migrated specialists going outside the country are for the most part men and they were ordinarily very young in age. The above towns consider exhibited that 79% of the laborers were underneath 35 years in age. The whole deal nonattendance of the male part, especially in the developmental time of their marriage, will have mind blowing impact on the existence accomplices and their family life.

## 2. Review of literature

Siji. M.M and Dr. Rekha K.S (2018) In context on the significance of improving conjugal quality among youthful grown-ups is important nowadays, the present examination focused of the adequacy of conjugal controlling on conjugal quality among youthful grown-ups. The present examination researched conjugal coordinating especially in Kerala express, its present status and noteworthy examples that are starting at now showing themselves to the point of reshaping the field. The individuals (N=60) couples were looked over different pieces of the region of Kerala, who wants exhorting in the association, and were directed conjugal quality scale.

by Shah (1995) in the pretest and thought moreover is given to those noteworthy developments, aptitudes and strategies have embraced by guide as a mediation with in a three months time of time. The got information were broke down by using matched 't' test and ANOVA. The outcomes revealed

huge complexities in most of the elements of conjugal quality, when conjugal coordinating. Guys are seen to be less predominant, better in self presentation and in the less sadness when contrasted with females. Higher conjugal quality is found better among couples whose length of marriage is under five years when contrasted with couples whose term of marriage is more essential than ten years. There is no critical differentiation in conjugal quality among youthful grown-ups subject to territory and family type.

SekarNastiti, B'tari and Wismanto, Bagus. (2017) all in all, the marriage is lived by a life partner who lives separately and participates with each other to shape the family. Starting late, various couples don't live individually, anyway in a far off city, and are known as a long-independent marriage or a laborer marriage. From various reasons that make the long partition marriage, one of which is the movement. The point of this examination is to find the condition of the marriage life in laborer marriage and the elements on observed conjugal fulfillment. This exploration technique uses the subjective strategy. Subjects in this examination are 3 sets of a couple rehearsing laborer marriage, which has a base marriage age of 5 years and has something like one adolescent. The exploration result has exhibited that spouses will as a rule experience disappointment in the marriage, while the husbands feel very lively in the marriage.

KamalbekKarymshakov and BurulchaSulaimano (2017) in his paper expects to consider the effect of relocation on work supply and time-use of ladies relinquished in Kyrgyzstan. Using the nuclear family overview information for 2011, work supply is estimated by word related decisions and working hours. Beside the work supply information, this examination uses point by point information on step by step time-use, which is broke down inside ladies' occupations. This methodology makes it possible to show the effect of movement not directly through the work supply examination, which may be restricted by reflecting work publicize lead just, yet also through the extent of allotment of time among different activities at home. To address the issue of endogeneity, the instrumental variable methodology is associated. Results show that the relocation of a family part constructs the choice of left-behind ladies to be unpaid family specialists. Most of the left-behind ladies pick unpaid family work and work more hours in this occupation. Regardless of the way that in the work supply examination wage-business isn't influenced by relocation, time-use show estimations reveal that wage-used ladies are by and large influenced through augmentations in the ideal opportunity for housework.

Anjali Fleury (2016) Understanding the complexities of sex and movement can result in tasks and systems that improve the points of interest and decrease the financial and social costs for female transients, who make up half of the overall vagrant populace. The report gives a broad appraisal of sexual introduction and movement writing, finding that relocation can improve the self-administration, human capital, and self-esteem of ladies, similarly as ladies' position and worth in their families and systems. Movement can move logically evenhanded social gauges and improve women's rights and access to resources. In spite of the way that movement is largely accommodating, there are various goals that limit its

increments, for instance, restrictive social gauges or laws, sexual introduction and racial segregation, and gender-specific vulnerabilities. The report wraps up by suggesting that transient ladies' human rights be guaranteed, and that vagrants be offered access to administrations and resources, for instance, prosperity, legitimate, and money related administrations. The report furthermore prescribes that legislatures endorse universal courses of action and traditions propelling rights.

Bal Ram Bhattarai et al., (2015) This examination looks into the effect of work on conjugal steadiness of working people. The goals of research were to perceive the measurement and business characteristics of companions, to examine the association between mate's work and conjugal dependability and to break down variables affecting conjugal solidness. The examination has used particular similarly as sensible research plan. The examination relies upon basic information accumulated in Pokhara. The consequences of the examination demonstrates that there routes out critical differentiations on mean scores of discussion about on relatives, spend diversion, collaboration with adolescents, prepare family spending arrangement, individual discourse and offer information things by work type. The outcomes furthermore demonstrate that as a rule the fulfillment from conjugal life is same across over business type anyway work of life partner in government work prompts higher love and responsibility. In this affiliation the examination for the most part bases on companion's business and conjugal dependability.

SoudabehGhoroghi et al., (2015) The present examination planned to take a gander at the association between marriage term and conjugal alteration of wedded Iranian understudies at postgraduate measurement in Malaysian universities. To this end, 220 heedlessly picked wedded individuals completed an online survey by methods for email. The respondents were examined with respect to their measurement information and completed Locke-Wallace Marital Adjustment Test (LWMAT; Locke and Wallace, 1959). Information examination gave information about mean scores, frequencies, rates, and Pearson's relationship. The outcomes revealed that there was no association between's length of marriage and conjugal change and conjugal modification remained truly stable after some time. This examination in like manner discusses the notoriety of gather in Malaysia among Iranian understudies at postgraduate measurements.

SemanurKodanÇetinkaya et al., (2015) Society powers diverse jobs on ladies and men in the family and the general public, concerning their sexual introduction. "Sex Role Concept" is essential with respect to the way that it is associated all pieces of life of individuals, practices, acknowledgments and outlooks of people (Çelik, 2008). In this perspective, sexual introduction jobs, which impact individuals' lives, can't be isolated from the variables which impact marriage. In this particular circumstance, the impressions of sexual introduction jobs on marriage and besides the impacts of marriage, which is one of most basic selections of individuals, on personal satisfaction were investigated.

Nadia Arif and Iram Fatima (2015) A cross sectional examination was coordinated to take a gander at conjugal fulfillment of people in various sorts of marriage. From each

couple, information were taken from one individual in a manner of speaking. The example comprised of 75 wedded individuals with 25 individuals (13 men and 12 ladies) from each marriage type, for instance coordinated marriage, marriage of choice with parental acknowledgment, and marriage of choice without parental acknowledgment, with the age extent of 21 to 40 years. Purposive examining system was used.

### 3. Conflict In Marital Relationship In India

By and large, conflict in a relationship consists of negative behaviour and interactions that cause strain in the quality of the relationship. Marital conflict refers to covert/overt interaction between spouses that is identified by the spouses as disagreement or a source of difficulty in the relationship. Couples may complain about sources of conflict ranging from verbal and physical abuse to personal characteristics and behaviour. The present section focuses on discussing the concept of marital conflict with reference to Indian society. To put it briefly, the dual career format seeks to integrate the demands of two full-time careers with family responsibilities. The conflict arising over power is a strong predictor of marital dissatisfaction. Power is an integral part of any relationship, especially close romantic relationships, because it determines how the partners relate to each other and how decisions are made. The relative economic independence accorded by a career can embolden the woman to consider herself powerful to some extent. Conversely, husbands too face the prospect of sharing the power that they traditionally held. "Individuals display more dominance when they perceive they are relatively equal in power to their partners than when they perceive they have more or less power than their partner". 500 women software professionals in Chennai found that women in the age group of 25-35 years had more work-family issues than other age groups. that young IT women professionals in Bangalore's high-tech sector were willing to focus on developing satisfying careers while primarily seeking support from parents in working against the traditional norms the society presented. These women also were expecting favourable inlaws and high partner support through negotiations and deference to customs suggesting the greater expectations that these career-focused women held about their family life. The literature has shown that childcare is one of the most important areas of conflict among married partners. Despite the changes that are happening in the family sphere with regard to the roles, the 'responsibility' for the regular care of the child seems to rest with the wife. A large-scale survey in Delhi (indicated that there was a sudden increase in household duties as a result of marriage and, additionally, of childbirth. Marital problems due to a 'working wife' were reported by respondents to be a relatively common occurrence. 21 dual earner couples who were all in full-time employment to find that more men than women considered work to be their first priority, whereas for women, both the domains were important and they "considered their family to be deserving of time and attention".

### 4. Factors Influencing Marital Conflict

As the traditional expectations of marriage have undergone quite a change, the professional work pressures and demands on the home front have brought about greater strains to the marital dyad. Considerable literature and lived experiences of many a couple stand testimony to the fact of

disagreements and differences that either blow up into crises in a relationship or get resolved and thus deepen the relationship. The imperatives of a career-driven life and the norms of a marital relationship in the context of a collectivistic society are not easily reconciled. This uneasy relationship could easily put the couple in the unenviable position of having to juggle the demands of both a career and a marriage. This section discusses some of the common factors that induce conflict in a marital relationship.

#### **Duration of Marriage**

Marital disagreements and conflict decline as the length of marriage increases. Long-term marriages may make the couple more tolerant of each other or help them come to a greater understanding of what each one wants thus leading to fewer disagreements. Younger couples may have more conflicts because of the pressure of ensuring financial stability for their future as a family. Decisions about finance, investments and expenditure patterns may lead to worries about the future and thus provide sufficient cause for arguments.

#### **Marital Quality**

Marital quality is the key concept explaining the happiness of a marriage. As societies undergo modernisation, adults also appear to be less socially oriented, show less compliance with social expectations and role imperatives, and also become more individually orientated, leading to greater differences between the couples. Therefore, conflicts among dual career couples are negatively associated with the overall level of satisfaction and quality of marriage.

#### **Time-Related Stress**

A major challenge reported by both men and women in dual career marriages is time management. This is directly related to the amount of time one is away from home for work, including the travel time to the workplace. This tells us the amount of time one is physically away from home. However, time-related stress is also related to the unavailability of the respondent to his/her spouse even when physically present at home.

#### **Children**

Another determinant of marital quality and a cause of arguments is the presence of children. Generally, children are associated with lower marital quality. Couples who have children, especially younger ones, are known to have greater strain in their marital life. Higher marital disagreements have been reported among the couples with younger children. It could be because it requires the spouses to engage more frequently in communication with regard to the requirements of raising a child. that motherhood led to both role overload and role conflict, especially for women.

### 5. Conclusion

The effect of work related division on conjugal nature of ladies mates of men working abroad. This examination will similarly expected to research the effect of social help, otherworldliness, work status; co-living course of action and length of pre-division stay on the conjugal nature of the examination gathering. The examination also going to consider

the effect of a bit of the socio-measurement factors on the conjugal nature of the examination gathering.

In any case, with available revelations the examination will focused up on one of the basic zones, which should pull in the

consideration of social specialists, advocates and individuals who are keen on the general welfare of people.
