ABSTRACT

Retail Trade in India is ruled by sloppy stores and 91% of the retail exchange is comprised of Kirana stores, road sellers, opening in-the-divider shops and roadside vendors. Clients incline toward the Traditional Retail (Kirana) stores in view of closeness to their homes, helpful timings, close colleague with the shop guardian, accessibility of credit and so on. Anyway a lot of present day buyers need charming shopping knowledge over closeness and convenience, bringing about the change in outlook in the inclinations of clients from disorderly to composed retailing. In this paper, the scientists endeavored to research the impact of Composed Food and Grocery Retailing on the store activities of Traditional Retail (Kirana) stores in Vijayawada and Guntur urban areas of CRDA district of Andhra Pradesh state and to assess the strategies for survival of Traditional Retail (Kirana) stores. The investigation sees that, Traditional Retail (Kirana) Store activities like Store Sales, Store Profits, Customers Visit and Employee Strength are diminished in both the urban areas because of Organized Retail Stores. The reasonableness of key choices for Traditional Retail (Kirana) Stores to contend with Organized Retail Store is indistinguishable in the two urban Communities. It winds up basic for the sloppy area to consider the changing purchaser's needs and inclinations for its survival and manageability in the setting of development of sorted out retailing.

1. Introduction

India is known as the 'Country of Shops'. After agribusiness, retailing is the second biggest business in India. Out of the in excess of 12 million stores that exist in different pieces of the nation, a large portion of them are little in nature and are in country regions. The occupants to stores proportion in India are about 100:1, that is a store serves 100 individuals, which is 2000:1 on account of Europe. Retailing in India is for the most part separated into two classes, viz. Chaotic Retailing and Organized Retailing. Disorderly Retailing incorporates customary arrangements of low cost retailing like Kirana shops, proprietor oversaw general stores, container shops, and accommodation stores, vendors, push truck and road merchants and so forth. Composed Retailing on the opposite side alludes to selling exercises attempted by authorized retailers, who are enlisted with assessment experts for deals expense and personal duty. Corporate subsidized hyper markets and retail chain stores and secretly kept up huge retail locations are not many instances of composed retailers. Retail Trade in India is commanded by chaotic stores and 91% of the retail exchange is comprised of Kirana stores, road sellers, gap in-the-divider shops and roadside vendors. The points of interest delighted in by the sloppy or conventional retailing are: minimal effort structure, lower rentals and ease of work. Moreover, clients incline toward these stores as a result of nearness to their homes, helpful timings, close associate with the retailer, accessibility of credit, acknowledgment of telephonic request and arrangement for home conveyance.

In any case, a lot of present day buyers need charming shopping background over vicinity and accommodation. The customary Kirana stores are trailing behind the sorted out retailers in giving such an encounter and as a result missing out those shoppers. Despite the fact that the Indian retail industry is ruled by disorderly retailing, the portion of sorted out retailing ought not be undermined. It is gradually however

relentlessly developing year over year and rises as a power to figure with in the days to come. There has been a change in perspective in the inclinations of clients from sloppy to sorted out, which is apparent from the expanding support towards composed retailing (See Table-1). Studies in different pieces of India embraced by analysts to assess the impacts of composed retailing on chaotic retailing have given some significant perceptions. The impact of sorted out retailing on the store tasks like incomes, benefits, client footfall, work and conclusion pace of sloppy retail sector demonstrates that chaotic retailers (Kirana stores) in the area territories of sorted out retailers seen a decrease in their deals and benefit after the passage of huge corporate into retailing.

In any case, this unfavorable effect on store activities of chaotic retailers (Kirana stores) debilitated after some time. There was no solid proof that there is a decrease in the work in the chaotic segment with the rise of the sorted out retailers. It is also detected that the endeavors from disorderly retailers to redesign their business practices have helped them to recover. Thinking about these certainties, the scientists endeavored to explore the impact of Organized Food and Grocery Retailing on the store activities of Traditional Retail (Kirana) stores in CRDA area of Andhra Pradesh state and to investigate techniques for survival of Traditional Retail (Kirana) stores in this paper.

2. Review of literature

Brennan and Lundster (2000) explore the effect of enormous rebate stores on little US towns and seen that customers shop at rebate stores for value limits and assortment and visit strength stores for novel things [3].

Broadbridge and Calderwood (2002) surmised that, survival of customary stores from the expanded rivalry from enormous sorted out retail locations incredibly relies upon responsibility and ability of conventional retailer to meet the

neighborhood network needs[4]. Radhakrishnan (2004) infers that the most influenced stores with the passage of sorted out retail locations are: Small stores with little store zone, less deals volume, couple of worker quality and separated stores that does not have joint effort with different stores [5].

Anuradha Kalhan (2007) called attention to that shopping centers have diminished the offers of little store and road sellers in Mumbai. There is a lofty decrease in closeout of natural products, vegetables, prepared nourishment, goods, pieces of clothing, electronic products in these stores coming about 50% of them with conclusion or decrease in business [6].

Vijayraghavan and Ramasurya (2007) saw that, in spite of having strength in the Indian retail advertise, customary retailers are lagging behind composed retailers as far as assortment and run and losing deals volumes in a few pieces of the nation [7].

Thakkar and Bhatt (2007) felt that developing worries over the loss of employments and vocation in chaotic area constrained corporate retailers like Bharti Wal-Mart and Reliance to welcome little brokers and people to move toward becoming franchisees on a benefit sharing model [8].

Singh R.K. also, Tripathi, A.P. (2008) recognized that shopping centers in Delhi and NCR have influenced little stores, however, stores in luxurious territories and inward road were less influenced [9].

Joseph Mathew et.al. (2008) found that disorderly retailers saw a decrease in deals and benefit in the early long stretches of the section of sorted out retailers. There was no proof of a decrease in by and large work in the disorderly part. The unfavorable effect, notwithstanding, diminishes over a period. The examination demonstrates buyers and ranchers are for the most part profited by sorted out retailing [10].

Paromita Goswami and Mridula S Mishra (2009) recommended that, all kirana stores need a basic assessment of their quality and shortcomings and to modernize their stores with prompt impact so as to endure [11].

Kokatnur, Shilpa S. (2009) uncovered that conventional retailers are seriously influenced by slips in administration what's more, advancement methodologies and need to upgrade their plans of action [12].

Paromita Goswami (2009) presumed that, kirana stores should update their store and perform well in terms of clients need fulfillment so as to endure [13].

Deepak Devagan and Mandeep Kaur (2010) underscored that shopping centers in little urban communities can unstick the little stores and disintegrating their client base [14].

Shalla, S.A. furthermore, Mehta, M.S. (2013) announced that shopping centers positively affect sloppy retail outlets regarding deals and benefits and there is some legitimacy in permitting FDI in retail area in Jammu & Kashmir [15].

Hamil and Priyadarshini (2014) researched the effect of Supermarkets on disorderly retail locations in Tirunelveli. Real effects are observed to be decrease in deals volume, decrease in benefit and faithful client base [16].

3. Need of the study

The prior survey of writing uncovers that, little customary retail (Kirana) stores are incredibly influenced by the section of corporate into retailing and the rise of shopping center culture, however not many examinations contrast starting here of view. Not very many investigations have proposed techniques for conventional retailers to get by in the long run. In any case, investigations of this extent were not led in Vijayawada and Guntur urban areas of CRDA district, Andhra Pradesh. Increasingly over the current examinations are insufficient to address the worries of little retailers. Thus an organized investigation of impact of Organized Food and Grocery retailing on Traditional retail (Kirana) stores is expected to propose methodologies to battle the impacts from sorted out retailers.

4. Statement of the problem

India is a country of businesspeople, sellers and road merchants. Roughly 12 million shops are running in retail segment and 48.11million individuals are utilized in retailing. Studies demonstrate that development of sorted out retailing has scratched the business, benefits, client base and worker quality of chaotic or conventional retailers. This is apparent from the show of solid challenges by the businesspeople, sellers and road sellers against corporate retailing and FDI in retailing. Under these conditions Traditional retailers require viable techniques to endure and continue in the focused game with composed retail. Subsequently the theme, "Impact of Organized retailing on Traditional retail (Kirana) Stores: Strategies for Survival."

5. Objectives of the study

The destinations with which the investigation has been taken up are exhibited here under:

- To inspire the conclusions of the select Traditional retailers about the impact of Organized Food and Grocery retailing on their store activities.
- To assess the most appropriate procedures for the survival of Traditional (Kirana) stores.
- To offer recommendations for Traditional retailers to improve their exhibition.

6. Hypothesis study

The accompanying theories were encircled for the examination dependent on the destinations.

H01: Traditional Retail (Kirana) Store activities like Store Sales, Store Profits, Customers Visit and Employee Quality are not diminished in both the urban areas because of Organized Retail Stores.

H02: Suitability of key alternatives for Traditional Retail (Kirana) Stores to rival Organized Retail Store isn't indistinguishable in the two urban areas.

7. Scope of the study

The present investigation is an endeavor to analyze the impact of Organized Food and Grocery retailing on the store activities of Traditional retail (Kirana) stores. The investigation is attempted covering twin urban areas of CRDA district, Guntur and Vijayawada as it were. The investigation considers the feelings of conventional retailers occupied with Food & Grocery business

8. Methodology and data collection

The present investigation is observational in nature and considers the conclusions of merchants occupied with Food & Grocery retailing in twin urban communities of Guntur and Vijayawada of CRDA district, Andhra Pradesh regarding the impact of Organized retailing on the store tasks of Traditional retail (Kirana) stores. The investigation utilizes essential hotspots for information accumulation and the information has been gathered from the respondents through overview strategy utilizing poll as an instrument. The example unit considered for the investigation was respondents working inside the vicinity of composed retailers in the 4-kilometer span. Test of 100 respondents each from Guntur and Vijayawada were chosen by accommodation testing technique. To catch the feelings of the respondents, a well structured survey was created by thinking about the applicable writing, primer enquiry with the brokers and perspectives on specialists with in the field. To encourage the respondents to reply about the impact of Sorted out Food and Grocery retail locations on the store tasks of Traditional retail (Kirana) stores, a three-point scale was structured (see Table-4). For estimating the sentiments of the respondents on reasonableness of the key choices for contending with sorted out retail locations, Likert's five-point rating scale was received (see Table 5). The study was directed from February to May 2017. The gathered information has been gone through SPSS 17.0 for inferring results. Chi-square test is directed to test the freedom. Rank connection is assessed to evaluate the similitude (versus uniqueness) between the urban communities regarding different issues.

9. Data analysis and results

The age-wise creation of respondents uncovers that over 60% of the respondents from Vijayawada and Guntur are in the age gathering of 31-50. There are likenesses seen if there should be an occurrence of period of respondents of the two spots. The instructive capability of the respondents uncovers that over half of the respondents are having X standard and moderate as their instructive capability in both urban areas. More than half of the respondents from the two urban areas have an encounter of around 20 years in maintaining the business. There are likenesses if there should arise an occurrence of respondents of both Vijayawada and Guntur in such manner.

The information identifying with premises of the store uncovers that over half of the respondents of Vijayawada work from the rented premises though over half of the respondents from Guntur works from claim premises. The examination identifying with the size/zone of store uncovers that in the event of over 60% of the stores, the territory of the store is 100-300

Sq.ft. This is valid if there should be an occurrence of greater part stores of both Vijayawada and Guntur.

Over half of the working faculty of the store are contracted individuals if there should arise an occurrence of the two urban areas of Vijayawada and Guntur. Over half of the sorted out retail locations are found under 2kms from the conventional stores. The impact of Organized Retail Stores on Traditional Retail (Kirana) Store Operations is portrayed in Table-4. According to it, half and 53% of respondents individually from Vijayawada and Guntur communicated that their store deals diminished up to 20% after the section of sorted out retail locations. 56% of respondents from Vijayawada and 59% of respondents from Guntur uncovered that their store benefits dropped up to 20%. 49% of respondents each from Vijayawada and Guntur opined that they are seeing the disintegration of client visit up to 20%. Close half of the respondents from both Vijayawada and Guntur felt that their representative quality has stayed same even after the passage of composed retail locations in the region.

The investigation identifying with reasonableness of key alternatives for contending with sorted out retail locations. There are varieties in the perspectives on respondents identifying with both Vijayawada and Guntur. The accompanying vital alternatives were seen as most reasonable by the respondents of both Vijayawada and Guntur.

- Improving store show
- Make changes according to the requirements of the clients

The accompanying key choices were considered as appropriate by the respondents from Vijayawada and Guntur.

- Dropping product offerings less requested
- Increasing home conveyance
- Building on existing trust and positive attitude

The accompanying vital alternatives were seen as most reasonable by the respondents of Vijayawada.

- Maintaining tidiness to draw in clients
- Increasing the scope of items with important quality and in reasonable amounts
- Ensuring prepared accessibility of requested things

The accompanying vital choices were found as appropriate by the respondents from Guntur.

- Maintaining tidiness to pull in clients
- Increasing the scope of items with important quality and in reasonable amounts
- Ensuring prepared accessibility of requested things
- Collaborating with providers for smooth progression of provisions

10. Trial of Statistics

Chi-square test is directed to test the autonomy. Rank connection is assessed to evaluate the comparability (versus divergence) between the urban communities regarding the issues. About the effect of sorted out retail locations on conventional retail (Kirana) stores activities, the connection between position of store tasks and the degree of impact is critical as P-esteem is 0.000 (< 0.05) at 5 % huge level. That is the reactions are offered by the quality of the issue and the

reaction isn't given on collection all things considered. More often than not, the reaction is "Store tasks are diminished". Connection between the city of the store and position of store tasks isn't noteworthy as P – esteem is 0.268 (> 0.05). This demonstrates, the situation of store tasks is comparable in both the urban communities. Trial of Correlation between urban areas yielded the R – estimation of 0.96752 showing there is a high relationship seen between the urban communities with deference to position of store tasks. Subsequently, the invalid speculation, H01: Traditional Retail (Kirana) Store tasks like Store Sales,

Store Profits, Customers Visit and Employee Strength are not diminished in both the urban communities due to Organized Retail Stores, is rejected. In this manner, it is demonstrated that the "Store activities are diminished in both the urban communities". If there should be an occurrence of appropriateness of vital alternatives for contending with Organized Retail Store, the connection between the vital alternative and reasonableness is noteworthy as P -esteem is 0.000 (< 0.05) at 5 % huge level. That is the reactions are offered by the quality of the alternative and the reaction isn't given on accumulation all things considered. For a large portion of the key alternatives the reaction is "Generally Suitable". Reasonableness of vital alternatives was not affected by the city of the store, as P – esteem is 0.313 (> 0.05). In this way, it is construed that reasonableness of key choices was indistinguishable in both the urban areas. Trial of Correlation between urban areas delivered the R – estimation of 0.98521 proposing, there is a high relationship seen between the urban communities concerning reasonableness of key choices. Thus, the invalid speculation, H02: Suitability of vital alternatives for Traditional Retail (Kirana) Stores to contend with Organized Retail Store isn't indistinguishable in the two urban areas, is rejected. In this way, it is clear that "the reasonableness of vital alternatives is indistinguishable in both the urban communities".

11. Conclusions

From the prior investigation, it is watched that the conventional retail (Kirana) store activities like store deals, store benefits and clients visit are diminished in both the urban communities because of sorted out retail locations. In any case, the representative quality of the stores stayed same in the vast majority of the cases. These outcomes are reliable with those of Mathew, J et.al.as sorted out retailing in CRDA territory is at a beginning stage. It is set up that lion's share of the conventional retail (Kirana) stores' deals are diminished in both the urban communities with the section of composed retail locations. This finding substantiates the aftereffects of Anuradha Kalhan. Stores' benefits are diminished in both the urban areas with the development of composed retail locations. Clients visit to the conventional retail (Kirana) stores likewise dropped in both the urban communities with the approach of sorted out retail locations. These outcomes loan assurance to the discoveries of Deepak Devgan and Mandeep Kaur and Hamil and Priyadarshini. It is discovered that the reasonableness of key choices for Conventional Retail (Kirana) Stores to rival Organized Retail Store is indistinguishable in the two urban areas. The most favored choices in the request for inclination are: "Improving store show", "Make changes

according to the necessities of the clients", "Keeping up neatness to pull in clients" and "Expanding the scope of items with vital quality and in appropriate amounts". These outcomes fortify the investigations of Broad bridge, A., &Calderwood, E., and Paromita Goswami. It is proposed to the sloppy retailers to embrace changes according to the requirements of the clients in wording of scope of items with essential quality and in reasonable amounts to keep up its piece of the overall industry. They are too expected to keep up neatness in the store to draw in clients. Chaotic retailers ought to guarantee prepared accessibility of requested things and drop product offerings less requested to prune costs while improving store show. This will empower them to expand the client base. Expanding on existing trust and cooperative attitude likewise help them to hold the clients.

There has been a fractional change of Indian buyers to disparage sorted out retail. Their higher extra cash, expanded understanding and ability to spend will enlarge the development of sorted out retail area. In the mean time the accommodations of home-conveyance, buys on layaway and vicinity offered by the sloppy division will bait them to the closest corner-store for their prompt buys. It progresses toward becoming basic for the sloppy division to consider the changing buyer's needs and inclinations for its survival what's more, supportability with regards to rise of composed retailing

12. Implications of the study for future research

Impressive measure of research has gone into the investigation of impact of composed retail locations on conventional retail (Kirana) stores. Be that as it may, there is lack of data in the scholarly writing relevant to appropriateness of key alternatives for customary retail (Kirana) stores to rival composed retail locations. This study is relied upon to fix this lack to a more prominent degree. The examination likewise offers some commonsense ramifications to the retailers. The examination suggests that the procedures talked about would help the customary retailers not just in safe guarding their financial advantages yet in addition in rivaling the composed retailers with much energy and certainty. The techniques may likewise be controlled for sustenance and development of customary retail (Kirana) stores. The investigation results might be confirmed by different specialists by leading a similar report in different pieces of the nation. Barely any past investigations show that the impact of sorted out retail locations on customary retail (Kirana) stores is on wind down as time passes. Consequently different specialists may look at whether such conditions turn out in CRDA locale of Andhra Pradesh. Same investigation might be directed by including some more angles like impact of sorted out retail locations on different changes made by customary retailers in their business.

13. Restrictions of the study

The present examination is restricted to Food and Grocery subsector of retail division. The ends drawn out of this examination couldn't be appropriate neither to different subsectors of retailing or to different divisions of business. The study results are gotten from the select customary retailers of Guntur and Vijayawada urban communities of CRDA district of Andhra Pradesh and consequently couldn't be translated as mirroring the normal assessment of Food and Grocery retailers in India or on the planet.
